PRVAX

T. ROWE PRICE

Virginia Tax-Free Bond Fund

The fund primarily invests in high-quality Virginia municipal bonds and is well suited for investors seeking income that is exempt from federal and Virginia state income taxes.

HIGHLIGHTS

- Weakness in the municipal market over the second half of the fund's fiscal year offset strong gains earlier in the reporting period. Municipal bonds sold off significantly following the unexpected presidential election result. The downturn was compounded by high issuance levels, fund outflows, and uncertainty around tax policy and regulatory reform.
- The Virginia Tax-Free Bond Fund posted a modest gain for the 12-month
 period as negative results in the second half of the fiscal year largely offset
 positive returns earlier in the reporting period. While we took steps to
 moderate interest rate risk, it was not enough to prevent underperformance
 relative to our peers.
- Virginia's debt burden has grown but is still manageable. The state's credit ratings—AAA, with a stable outlook from all three major rating agencies—reflect its relatively favorable fiscal position, pension concerns notwithstanding.
- While the uncertainties surrounding tax reform and the increased chance
 of rising yields represent near-term headwinds for broad muni market
 performance, fundamentals are sound overall, and global economic
 uncertainties could spur demand for the asset class.

The views and opinions in this report were current as of February 28, 2017. They are not guarantees of performance or investment results and should not be taken as investment advice. Investment decisions reflect a variety of factors, and the managers reserve the right to change their views about individual stocks, sectors, and the markets at any time. As a result, the views expressed should not be relied upon as a forecast of the fund's future investment intent. The report is certified under the Sarbanes-Oxley Act, which requires mutual funds and other public companies to affirm that, to the best of their knowledge, the information in their financial reports is fairly and accurately stated in all material respects.

Manager's Letter

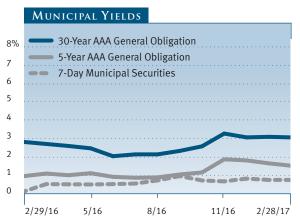

Fellow Shareholders

Tax-free municipal bonds were flat in our fiscal year ended February 28, 2017. In the first half of the period, municipal bonds posted strong returns as the asset class was supported by solid demand, manageable supply, and a flight-to-quality rally in late June stemming from the UK's vote to leave the European Union. In the last six months of the reporting period, municipal and Treasury bonds sold off significantly following the unexpected result of November's U.S. presidential election. Weakness in the municipal market was further compounded by high issuance levels, fund outflows, and uncertainty around tax policy and regulatory reform. The Virginia Tax-Free Bond Fund underperformed its peer group in the 12-month period, but the fund's longer-term relative performance record remains favorable.

ECONOMY AND INTEREST RATES

Although U.S. economic growth was fairly lackluster in 2016 as a whole, the economy showed improvement in the second half of the calendar year. According to the Commerce Department's most recent estimate, fourth-quarter gross domestic product grew at an annualized pace of 1.9%. We expect a growth rate of around 2% to persist in the near term. Although the pace of employment growth moderated in 2016 compared with the last few years, the labor market remains strong, and wage growth has picked up. Inflation remains below the Federal Reserve's 2% objective, but headline inflation has been rising, in part because commodity prices have rebounded from early-2016 lows. Core inflation, which excludes food and energy costs, has also been creeping higher.

The Fed kept the fed funds target rate in the 0.25% to 0.50% range for most of 2016. After warning the financial markets for several months that the case for raising short-term rates had "strengthened," Fed officials lifted the fed funds target rate in December to a range of 0.50% to 0.75%—an increase of 25 basis points—citing an improving labor market and rising inflation. Shortly after our reporting period ended, the Fed decided to raise the fed funds rate again on March 15 to a range of 0.75% to 1.00%. T. Rowe Price Chief U.S. Economist Alan Levenson believes that the Fed is likely to watch the effects of its

Sources: Municipal Market Data and T. Rowe Price Associates. 7-day yields consist of the average of all municipal variable rate demand notes considered by T. Rowe Price to be eligible money market fund investments.

most recent rate increase on the economy and financial markets for at least a few months before deciding whether to raise rates again. He believes that the Fed is likely to raise rates two more times in 2017.

Longer-term Treasury and municipal yields fell through early summer but increased in the second half of 2016. They rose sharply in the last few months of 2016 in anticipation of a December Fed rate hike and potentially

stimulative fiscal policies under the Trump administration that could lead to higher inflation and larger deficits. Long-term muni and Treasury yields stayed fairly close to their year-end 2016 levels in the first two months of 2017, as the probability for another rate hike in March increased.

With high-quality 30-year municipal bond yields slightly higher than the 30-year U.S. Treasury bond yield at the end of February, munis offered relative value for many fixed income investors on an after-tax basis. As an illustration of their attractiveness, on February 28, 2017, the 3.05% yield offered by a 30-year tax-free general obligation (GO) bond rated AAA was about 103% of the 2.97% pretax yield offered by a 30-year Treasury bond. Including the 3.8% net investment income tax that took effect in 2013 as part of the Affordable Care Act, the top marginal federal tax rate currently stands at 43.4%. An investor in

WHEN LESS IS REALLY MORE

Despite low nominal yields, municipal bonds remain attractive for investors facing high income taxes. The interest income from a tax-free municipal bond is exempt from federal income taxes.* In addition, most states and cities do not tax income earned on their own bonds for their residents. A municipal bond could, therefore, be triple-tax-free—exempt from federal, state, and local taxes. Tax-free municipal bond income is also exempt from a net investment income tax that took effect in 2013, in which a 3.8% tax is imposed on the lesser of your total net investment income or your modified adjusted gross income in excess of \$250,000 (for married couples filing jointly) or \$200,000 for single individuals.

Even though munis typically pay less than taxable issues, investors in the highest tax brackets are likely to realize higher after-tax, bottom-line results from tax-exempt securities. As you can see in the table below, an investor in the 33% federal tax bracket would need to purchase a taxable security yielding 7.5% to match the after-tax return of a municipal security yielding 5.0%.

Factoring in state and local income tax rates—which, of course, will vary widely—makes calculating the taxable-equivalent yield more complicated. However, the taxable-equivalent yields listed in the table would be even higher. This underscores the advantage of tax-free income provided by municipal securities.

	Tax-Exempt Yields and Taxable-Equivalent Yields						
Tax-Exempt	Taxable-Equivalent Yields						
Yields		Your Federal Marginal Tax Bracket					
	25.0%	25.0% 28.0% 33.0% 36.8%** 38.8%** 43.4%					
1.0%	1.3%	1.4%	1.5%	1.6%	1.6%	1.8%	
1.5	2.0	2.1	2.2	2.4	2.5	2.7	
2.0	2.7	2.8	3.0	3.2	3.3	3.5	
2.5	3.3	3.5	3.7	4.0	4.1	4.4	
3.0	4.0	4.2	4.5	4.8	4.9	5.3	
3.5	4.7	4.9	5.2	5.5	5.7	6.2	
4.0	5.3	5.6	6.0	6.3	6.5	7.1	
4.5	6.0	6.3	6.7	7.1	7.4	8.0	
5.0	6.7	6.9	7.5	7.9	8.2	8.8	

^{*} Some municipal bond income may be subject to the federal alternative minimum tax (AMT).

^{**} These federal marginal tax brackets include an additional 3.8% net investment income tax. Note: When comparing yields in this manner, make sure to compare securities or mutual funds of similar credit quality and maturity or the comparison will not be valid. This chart is for illustrative purposes only and does not represent the performance of any specific security.

this tax bracket would need to invest in a taxable bond yielding about 5.39% to receive the same after-tax income as that generated by the municipal bond. (To calculate a municipal bond's taxable-equivalent yield, divide the yield by the quantity of 1.00 minus your federal tax bracket expressed as a decimal—in this case, 1.00 – 0.434, or 0.566.)

MUNICIPAL MARKET NEWS

Total municipal bond issuance in 2016 was a record-setting \$445 billion. Issuance had declined early in the year, but the pace of refunding deals quickened as issuers sought to take advantage of lower yields and refinance their older, higher cost debt ahead of both the U.S. election and a potential rate hike by the Fed. After 54 consecutive weeks of inflows to municipal bond funds, flows turned negative in mid-October, and sizable outflows continued through the end of 2016. Flows turned positive in the first two months of 2017.

Generally, fundamentals for municipal issuers remain solid, and most issuers in the \$3.8 trillion municipal bond market have been fiscally responsible. State and local governments in general have been cautious about adding to indebtedness since the 2008 financial crisis, and a strengthening economy has helped tax revenues rebound. Over 60% of the market, as measured by the Bloomberg Barclays Municipal Bond Index, is AAA or AA rated.

Although the market is overwhelmingly high quality, many states and municipalities are grappling with underfunded pensions and other post-employment benefit (OPEB) obligations. New reporting rules from the Governmental Accounting Standards Board are bringing greater transparency to state and local governments' pension funding gaps, long-term risks that investors often overlooked in the past. We believe the market will increasingly price in higher pension risks as the magnitude of unfunded liabilities becomes more conspicuous.

The results of the presidential election raised concerns about the impact that tax reform could have on the municipal bond asset class. Donald Trump campaigned on a promise to reduce the top individual marginal tax rate from 43.4% (including the additional 3.8% income tax that resulted from the Affordable Care Act) to 33%. Other proposals, including lower corporate tax rates and bank regulatory changes, could also impact demand for municipal bonds. While it is too early to tell which provisions will be included in a tax reform bill, Trump has indicated he will not eliminate the tax exemption

WHAT RISING RATES MEAN FOR BONDS

With the Federal Reserve expected to continue its measured approach to interest rate hikes, yields on U.S. Treasuries and other fixed income securities are slowly increasing from the low levels of the recent past. We expect the Fed to pause after each increase in the federal funds rate and to carefully analyze incoming U.S. economic data to be sure that economic activity is strong enough to withstand further incremental moves toward normalization of monetary policy. The Fed's more gradual approach to interest rate increases than in previous cycles nonetheless brings the risk of rising rates to the forefront for bond investors. Higher interest rates weigh on the prices of most types of bonds.

Importantly, investors also need to understand that not all bonds or bond funds respond uniformly in such an environment. In particular, the duration of a bond or bond fund, which is tied in part to its maturity, provides important information about how the asset will perform when rates change. Also, some bond sectors and bonds of varying quality are better insulated from rate changes and may even perform well as rates rise.

A bond fund's duration (shown in the Portfolio Characteristics exhibit) is the most precise indicator of how the fund will respond to rising rates. If a bond fund has a duration of 5.3 years, for example, the fund's net asset value (NAV) would be expected to fall about 5.3% for every one-percentage-point rise in rates. Even this is only part of the picture, however—rising rates will also generally mean higher dividends per share as the fund invests in new, higher-yielding bonds. As a result, the fund's total return (change in NAV plus dividend income) is unlikely to fall as steeply as the duration indicates.

Generally, bond funds with a shorter weighted average maturity—in other words, those with holdings that come due sooner—have lower durations and should fare better than funds with longer average maturities when rates rise. This is because investors in the bonds will not be locked into lower yields, or coupon payments, for long. When the fund receives principal payments from maturing bonds, it can reinvest them at a higher yield. Indeed, for investors in a bond fund with a low duration and a low weighted average maturity, higher rates can mean an increase in income potential.

Some fixed income sectors offer an added degree of protection from rising rates. Floating rate funds invest in bank loans where the interest rate on the loan is periodically reset, meaning that investors face very little interest rate risk. However, the bank loans usually have a credit profile that is below investment quality, which means these investments may have greater exposure to default risk than investment-grade bonds. Mortgage-backed securities typically fare better than other bonds of similar maturity when rates rise modestly, as fewer homeowners will refinance and pay off their loans early.

In addition, lower-quality bonds with a price that is highly sensitive to the issuer's credit rating (shown in the Quality Diversification exhibit) may perform better as rates increase. Rising rates often accompany a strengthening economy, which can lead to credit upgrades for lower-rated issuers. Also, the higher yields offered by lower-quality bonds provide an additional cushion to total return if bond prices fall as interest rates increase. However, lower-quality bonds are generally exposed to greater credit risk than other bonds because the securities carry a higher risk of default.

of municipal bonds. We believe the attractiveness of the municipal asset class will endure, even at lower marginal tax rates. Another result of the November vote was the election of Ricardo Rosselló as governor of Puerto Rico, which is struggling to return to fiscal solvency after defaulting on more than \$1 billion of its debt during the past 12 months. The market perceives Rosselló as bondholder friendly, and Puerto Rican bonds rallied following his win. However, after our reporting period ended, investors generally reacted unfavorably to a fiscal plan certified by the U.S. financial oversight board that prioritizes government services and pensions over payments to bondholders.

Performance was mixed across all the major segments of the muni market over the last year. Revenue bonds posted positive, but muted, returns and outperformed GO debt. We continue to favor bonds backed by a dedicated revenue stream over GOs, as we consider revenue bonds to be largely insulated from the pension funding concerns facing state and local governments. Across our municipal platform, generally, we have an overweight to the higher-yielding health care and transportation revenue-backed sectors. Among revenue bonds, high yield tobacco bonds outpaced the broad muni index by a wide margin for the period, despite losing nearly 8% in the fourth quarter of 2016. Most remaining subsectors produced low positive returns, led by housing and industrial revenue/pollution control revenue. Education revenue bonds edged lower.

VIRGINIA MARKET NEWS

Virginia's economy remains predominantly sound. The commonwealth's 4.0% unemployment rate in January was down slightly from 4.1% a year earlier and compares favorably with the national rate. Virginia's population continues to grow steadily at about 1% per year, and Virginians remain relatively wealthy with per capita income in the third quarter of 2016 ranking 11th among the states at 108% of the national average. Employment growth over the past year has been good at 1.4%, but it was a bit slower than the 1.6% national growth rate.

For the fiscal year ended June 30, 2016, general fund revenues (on a budgetary basis) grew by \$372 million, or 2.0%—below expectations of 3.2% growth. Most of the underperformance was due to lower-than-expected personal income tax and sales tax collections. While Virginia's 2016–2018 biennial budget was balanced, the revenue shortfall

(versus expectations) in fiscal 2016 had repercussions for the growth assumptions that were made when the budget was formulated. Headed into this year's legislative session, the governor and legislators were forecasting a fairly sizable budget shortfall of up to \$1.5 billion over fiscal years 2017 and 2018.

The legislative session recently ended, and a balanced budget emerged with a combination of revenue enhancements and expense cuts. The most significant of these were a postponement of raises for state employees and teachers and transfers from the rainy day fund. Meanwhile, state general fund revenues recently trended upward. Collections for the first seven months of fiscal 2017 are up 4.6%. Specifically, January 2017 revenues were 7.4% higher than the previous January. The revised budget calls for revenue growth of 3.0% in fiscal 2017 and 3.2% in fiscal 2018.

Virginia enjoys a favorable reserve profile and ample internal liquidity, with \$4.4 billion of primary liquidity as of January 31, 2017. The Revenue Stabilization Fund (rainy day fund) held \$841 million, or 4.3% of revenues, as of June 30, 2016; however, it is forecast to hold \$565 million, or 2.8% of revenues, as of June 30, 2017. The commonwealth's fiscal position compares favorably with that of other states. Officials have been proactive in managing Virginia's finances, and we continue to take comfort in their solid record of fiscal stewardship.

Virginia's debt burden has grown but is still manageable. The commonwealth has \$11.9 billion of total net tax-supported debt outstanding, ranking it in the top third among states when measured by debt per capita and debt relative to personal income, according to Moody's Investors Service. While Virginia does not face as dire a crisis in pension liabilities as some other states, we are concerned about the growth in the unfunded portion of its pension system.

As of June 30, 2016 (the most recent data available), the Virginia Retirement System (VRS) was funded at 72%. The unfunded portion of the VRS was high, at \$25 billion as of June 30, 2016, and has been rising as the commonwealth set its statutory contribution below what was recommended by its actuaries. However, Virginia's unfunded liabilities associated with OPEB are modest in comparison with other states. The state's credit ratings—AAA, with a stable outlook from all three major rating agencies—reflect its relatively favorable fiscal position, pension concerns notwithstanding.

PORTFOLIO REVIEW

The Virginia Tax-Free Bond Fund returned 0.56% for the 12-month period ended February 28, 2017, underperforming the Lipper Virginia Municipal Debt Funds Average, which returned 1.38%, but outpacing the 0.25% gain recorded by the broad Bloomberg Barclays Municipal

Performance Compar	ISON

Bond Index. Losses over the past six months partially offset the fund's solid gains in the first half of our fiscal year.

The past six months was a difficult market for tax-exempt bonds and your fund as rates rose

fairly sharply, particularly near the end of the 2016 calendar year. We stuck to our core strategy even as rates rose, as we believe that longer-maturity revenue bonds in the mid-quality credit range represent the best long-term value in the municipal market. While we took steps to moderate the higher interest rate risk incumbent with this positioning, it was not enough to prevent moderate underperformance relative to our peers over the past six and 12 months. Although we were disappointed by these results, we remain confident in our investment

approach. Led by our fundamental, research-driven process, we will continue to focus on finding securities with the best long-term prospects for the portfolio.

Your fund continued to compare favorably with its competitors over the long term. Lipper ranked the Virginia Tax-Free Bond Fund in the top decile among its peer group of Virginia municipal debt funds for the 10-year

period ended February 28, 2017. (Based on cumulative total return, Lipper ranked the Virginia Tax-Free Bond Fund 14 of 30, 8 of 30, 3 of 27, and 2 of 23 Virginia municipal debt funds for the 1-, 3-, 5-, and 10-year periods ended February 28, 2017, respectively. *Past performance cannot guarantee future results.*)

We took a cautious approach on interest rate positioning, shortening the fund's weighted average maturity from 16.2 years to 16.1 years and reducing the duration from 4.7 to 4.5 years since our last letter. These adjustments were not enough to prevent a loss for the portfolio, though, as a very difficult fourth quarter wiped out our gains for the 12-month period. Looking ahead, while we agree with the view that

interest rates are moving higher, we believe the market is overly anxious about the negative impact of rate increases. We are seeking the right balance between investing for higher yields and keeping interest rate risk in the low to moderate range.

Though the fundamentals of our strategy did not vary markedly during the reporting period, some of the characteristics of our portfolio have shifted a bit over the past six months. At the sector level, we slightly increased

our allocation to the transportation and health care sectors, and these remain our largest sector concentrations. Our most significant addition in transportation was bonds for the **Chesapeake Bay Bridge & Tunnel District**. These mid-BBB rated securities offer a premium yield. However, our timing was not perfect as we bought most of our new position just as rates began to move higher (and bond prices moved lower). We did add more after interest rates rose, bringing our average cost down, but these bonds still represented a loss at the end of the period. Over the long run, we believe they will provide a good return to the portfolio. (Please refer to the fund's portfolio of investments for a complete list of holdings and the amount each represents in the portfolio.)

We added moderately to health care, mostly in the nonrated life care segment. Significant additions were bonds from retirement centers such as **Goodwin House** in Alexandria and **Westminster at Lake**

such as Goodwin House in Alexandria and Westminster at Lake

Based on net assets as of 2/28/17.

Sources: Moody's Investors Service; if Moody's does not rate a security, then Standard & Poor's (S&P) is used as a secondary source. When available, T. Rowe Price will use Fitch for securities that are not rated by Moody's or S&P. T. Rowe Price does not evaluate these ratings but simply assigns them to the appropriate credit quality category as determined by the rating agency. Prerefunded securities are rated based on their current prerefunded status, regardless of which nationally recognized statistical rating organization provided the original rating.

Ridge in Prince William County. These securities will boost the fund's income potential, but similar to the Chesapeake purchase, our timing was not ideal.

Our prerefunded allocation spiked higher as a number of our holdings were refinanced by their issuers, and we like the defensive nature of this positioning. Prerefunded bonds, which are typically backed by U.S. Treasury securities, are the highest-quality bonds in our market, typically mature within five years, and provide the fund with another source of liquidity in addition to cash. With

over 15% of our portfolio in prerefunded bonds, we believe we are well positioned should rates adjust sharply higher. The portfolio's quality diversification was little changed over the past year, with nearly two-thirds of the fund's assets allocated to the highest-quality AAA and AA segments.

OUTLOOK

We believe that the municipal bond market remains a high-quality market that offers good opportunities for long-term investors seeking tax-free income. While the uncertainties surrounding tax reform and the increased chance of rising yields represent near-term headwinds for broad muni market performance, in our view, fundamentals are sound overall, and global economic uncertainties could spur demand

for the asset class. As the Fed continues on the path to interest rate normalization, muni bond yields are likely to rise along with Treasury yields—although probably not to the same extent. While higher yields typically pressure bond prices, we expect any potential Fed rate increases to be gradual and modest, and believe we could remain in a relatively low-rate environment for some time. Moreover, munis should be less susceptible to slowly rising rates than Treasuries given their attractive tax-equivalent yields and the steady demand for tax-exempt income.

While we believe that many states deserve high credit ratings and will be able to continue servicing their debts, we have longer-term concerns about significant funding shortfalls for pensions and OPEB obligations in some jurisdictions. These funding gaps stem from investment losses during the 2008 financial crisis, insufficient plan contributions over time, and unrealistic return assumptions. Although few large plans are at risk of insolvency in the near term, the magnitude of unfunded liabilities is becoming more conspicuous in a few states.

Ultimately, we believe independent credit research is our greatest strength and will remain an asset for our investors as we navigate the current market environment. As always, we focus on finding attractively valued bonds issued by municipalities with good long-term fundamentals—an investment strategy that we believe will continue to serve our investors well.

Thank you for investing with T. Rowe Price.

Respectfully submitted,

Hugh D. McGuirk

The committee chairman has day-to-day responsibility for managing the portfolio and works with committee members in developing and executing the fund's investment program.

RISKS OF INVESTING IN FIXED INCOME SECURITIES

Bonds are subject to interest rate risk (the decline in bond prices that usually accompanies a rise in interest rates) and credit risk (the chance that any fund holding could have its credit rating downgraded or that a bond issuer will default by failing to make timely payments of interest or principal), potentially reducing the fund's income level and share price. The fund is less diversified than one investing nationally. Some income may be subject to state and local taxes and the federal alternative minimum tax.

GLOSSARY

Basis point: One one-hundredth of one percentage point, or 0.01%.

Bloomberg Barclays Municipal Bond Index: A broadly diversified index of taxexempt bonds.

Duration: A measure of a bond fund's sensitivity to changes in interest rates. For example, a fund with a duration of five years would fall about 5% in price in response to a one-percentage-point rise in interest rates, and vice versa.

Federal funds rate (or target rate): The interest rate charged on overnight loans of reserves by one financial institution to another in the United States. The Federal Reserve sets a target federal funds rate to affect the direction of interest rates.

General obligation (GO) debt: A government's strongest pledge that obligates its full faith and credit, including, if necessary, its ability to raise taxes.

Gross domestic product (GDP): The total market value of all goods and services produced in a country in a given year.

Lipper averages: The averages of available mutual fund performance returns for specified time periods in categories defined by Lipper Inc.

Lipper indexes: Fund benchmarks that consist of a small number (10 to 30) of the largest mutual funds in a particular category as tracked by Lipper Inc.

Other post-employment benefits (OPEB): Benefits paid to an employee after retirement, such as premiums for life and health insurance.

Prerefunded bond: A bond that originally may have been issued as a general obligation or revenue bond but that is now secured by an escrow fund consisting entirely of direct U.S. government obligations that are sufficient for paying the bondholders.

Revenue (or revenue-backed) bond: A bond issued to fund specific projects, such as airports, bridges, hospitals, or toll roads, where a portion of the revenue generated is used to service the interest payments on the bonds.

Note: Bloomberg Index Services Ltd. Copyright 2017, Bloomberg Index Services Ltd. Used with permission.

GLOSSARY (CONTINUED)

SEC yield (30-day): A method of calculating a fund's yield that assumes all portfolio securities are held until maturity. Yield will vary and is not guaranteed.

Weighted average maturity: A measure of a fund's interest rate sensitivity. In general, the longer the average maturity, the greater the fund's sensitivity to interest rate changes. The weighted average maturity may take into account the interest rate readjustment dates for certain securities. Money funds must maintain a weighted average maturity of less than 60 days.

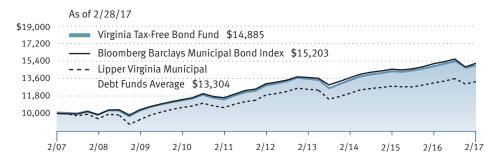

Yield curve: A graph depicting the relationship between yields and maturity dates for a set of similar securities. A security with a longer maturity usually has a higher yield. If a short-term security offers a higher yield, then the curve is said to be "inverted." If short- and long-term bonds are offering equivalent yields, then the curve is said to be "flat."

Performance and Expenses

GROWTH OF \$10,000

This chart shows the value of a hypothetical \$10,000 investment in the fund over the past 10 fiscal year periods or since inception (for funds lacking 10-year records). The result is compared with benchmarks, which may include a broad-based market index and a peer group average or index. Market indexes do not include expenses, which are deducted from fund returns as well as mutual fund averages and indexes.

VIRGINIA TAX-FREE BOND FUND

AVERAGE ANNUAL COMPOUND TOTAL RETURN

Periods Ended 2/28/17	1 Year	5 Years	10 Years
Virginia Tax-Free Bond Fund	0.56%	3.06%	4.06%

This table shows how the fund would have performed each year if its actual (or cumulative) returns for the periods shown had been earned at a constant rate. Average annual total return figures include changes in principal value, reinvested dividends, and capital gain distributions. Returns do not reflect taxes that the shareholder may pay on fund distributions or the redemption of fund shares. Past performance cannot guarantee future results. When assessing performance, investors should consider both short- and long-term returns.

FUND EXPENSE EXAMPLE

As a mutual fund shareholder, you may incur two types of costs: (1) transaction costs, such as redemption fees or sales loads, and (2) ongoing costs, including management fees, distribution and service (12b-1) fees, and other fund expenses. The following example is intended to help you understand your ongoing costs (in dollars) of investing in the fund and to compare these costs with the ongoing costs of investing in other mutual funds. The example is based on an investment of \$1,000 invested at the beginning of the most recent six-month period and held for the entire period.

Actual Expenses

The first line of the following table (Actual) provides information about actual account values and expenses based on the fund's actual returns. You may use the information on this line, together with your account balance, to estimate the expenses that you paid over the period. Simply divide your account value by \$1,000 (for example, an \$8,600 account value divided by \$1,000 = 8.6), then multiply the result by the number on the first line under the heading "Expenses Paid During Period" to estimate the expenses you paid on your account during this period.

Hypothetical Example for Comparison Purposes

The information on the second line of the table (Hypothetical) is based on hypothetical account values and expenses derived from the fund's actual expense ratio and an assumed 5% per year rate of return before expenses (not the fund's actual return). You may compare the ongoing costs of investing in the fund with other funds by contrasting this 5% hypothetical example and the 5% hypothetical examples that appear in the shareholder reports of the other funds. The hypothetical account values and expenses may not be used to estimate the actual ending account balance or expenses you paid for the period.

Note: T. Rowe Price charges an annual account service fee of \$20, generally for accounts with less than \$10,000. The fee is waived for any investor whose T. Rowe Price mutual fund accounts total \$50,000 or more; accounts electing to receive electronic delivery of account statements, transaction confirmations, prospectuses, and shareholder reports; or accounts of an investor who is a T. Rowe Price Preferred Services, Personal Services, or Enhanced Personal Services client (enrollment in these programs generally requires T. Rowe Price assets of at least \$100,000). This fee is not included in the accompanying table. If you are subject to the fee, keep it in mind when you are estimating the ongoing expenses of investing in the fund and when comparing the expenses of this fund with other funds.

You should also be aware that the expenses shown in the table highlight only your ongoing costs and do not reflect any transaction costs, such as redemption fees or sales loads. Therefore, the second line of the table is useful in comparing ongoing costs only and will not help you determine the relative total costs of owning different funds. To the extent a fund charges transaction costs, however, the total cost of owning that fund is higher.

Fund Expense Example (CONTINUED)

VIRGINIA TAX-FREE BOND FUND

	Beginning Account Value 9/1/16	Ending Account Value 2/28/17	Expenses Paid During Period* 9/1/16 to 2/28/17
Actual	\$1,000.00	\$971.90	\$2.35
Hypothetical (assumes 59	6		
return before expenses)	1,000.00	1,022.41	2.41

^{*}Expenses are equal to the fund's annualized expense ratio for the 6-month period (0.48%), multiplied by the average account value over the period, multiplied by the number of days in the most recent fiscal half year (181), and divided by the days in the year (365) to reflect the half-year period.

QUARTER-END RETURNS

Periods Ended 12/31/16	1 Year	5 Years	10 Years
Virginia Tax-Free Bond Fund	0.70%	3.43%	4.07%

Current performance may be higher or lower than the quoted past performance, which cannot guarantee future results. Share price, principal value, and return will vary, and you may have a gain or loss when you sell your shares. For the most recent month-end performance, please visit our website (troweprice.com) or contact a T. Rowe Price representative at 1-800-225-5132.

This table provides returns net of expenses through the most recent calendar quarter-end rather than through the end of the fund's fiscal period. It shows how the fund would have performed each year if its actual (or cumulative) returns for the periods shown had been earned at a constant rate. Average annual total return figures include changes in principal value, reinvested dividends, and capital gain distributions. Returns do not reflect taxes that the shareholder may pay on fund distributions or the redemption of fund shares. When assessing performance, investors should consider both short- and long-term returns.

EXPENSE RATIO

Virginia Tax-Free Bond Fund

0.47%

The expense ratio shown is as of the fund's fiscal year ended 2/29/16. This number may vary from the expense ratio shown elsewhere in this report because it is based on a different time period and, if applicable, includes acquired fund fees and expenses but does not include fee or expense waivers.

Financial Highlights	For a share outstanding throughout each period

Notes to Financial Statements

T. Rowe Price State Tax-Free Income Trust (the trust), is registered under the Investment Company Act of 1940 (the 1940 Act). The Virginia Tax-Free Bond Fund (the fund) is a nondiversified, open-end management investment company established by the trust. The fund seeks to provide, consistent with prudent portfolio management, the highest level of income exempt from federal and Virginia state income taxes by investing primarily in investment-grade Virginia municipal bonds.

NOTE 1 - SIGNIFICANT ACCOUNTING POLICIES

Basis of Preparation The fund is an investment company and follows accounting and reporting guidance in the Financial Accounting Standards Board (FASB) *Accounting Standards Codification* Topic 946 (ASC 946). The accompanying financial statements were prepared in accordance with accounting principles generally accepted in the United States of America (GAAP), including, but not limited to, ASC 946. GAAP requires the use of estimates made by management. Management believes that estimates and valuations are appropriate; however, actual results may differ from those estimates, and the valuations reflected in the accompanying financial statements may differ from the value ultimately realized upon sale or maturity.

Investment Transactions, Investment Income, and Distributions Income and expenses are recorded on the accrual basis. Premiums and discounts on debt securities are amortized for financial reporting purposes. Dividend income and capital gain distributions are recorded on the ex-dividend date. Income tax-related interest and penalties, if incurred, would be recorded as income tax expense. Investment transactions are accounted for on the trade date. Realized gains and losses are reported on the identified cost basis. Income distributions are declared daily and paid monthly. Distributions to shareholders are recorded on the ex-dividend date. Capital gain distributions are generally declared and paid by the fund annually.

New Accounting Guidance In October 2016, the Securities and Exchange Commission (SEC) issued a new rule, *Investment Company Reporting Modernization*, which, among other provisions, amends Regulation S-X to require standardized, enhanced disclosures, particularly related to derivatives, in investment company financial statements. Compliance with the guidance is effective for financial statements filed with the SEC on or after August 1, 2017; adoption will have no effect on the fund's net assets or results of operations.

NOTE 2 - VALUATION

The fund's financial instruments are valued and its net asset value (NAV) per share is computed at the close of the New York Stock Exchange (NYSE), normally 4 p.m. ET, each day the NYSE is open for business. However, the NAV per share may be calculated at a time other than the normal close of the NYSE if trading on the NYSE is restricted, if the NYSE closes earlier, or as may be permitted by the SEC.

Fair Value The fund's financial instruments are normally valued twice daily to support the computation of the fund's intraday NAV and end of day NAV. The fund's financial instruments are reported at fair value, which GAAP defines as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The T. Rowe Price Valuation Committee (the Valuation Committee) is an internal committee that has been delegated certain responsibilities by the fund's Board of Trustees (the Board) to ensure that financial instruments are appropriately priced at fair value in accordance with GAAP and the 1940 Act. Subject to oversight by the Board, the Valuation Committee develops and oversees pricing-related policies and procedures and approves all fair value determinations. Specifically, the Valuation Committee establishes procedures to value securities; determines pricing techniques, sources, and persons eligible to effect fair value pricing actions; oversees the selection, services, and performance of pricing vendors; oversees valuation-related business continuity practices; and provides guidance on internal controls and valuation-related matters. The Valuation Committee reports to the Board and has representation from legal, portfolio management and trading, operations, risk management, and the fund's treasurer

Various valuation techniques and inputs are used to determine the fair value of financial instruments. GAAP establishes the following fair value hierarchy that categorizes the inputs used to measure fair value:

- Level 1 quoted prices (unadjusted) in active markets for identical financial instruments that the fund can access at the reporting date
- Level 2 inputs other than Level 1 quoted prices that are observable, either directly or indirectly (including, but not limited to, quoted prices for similar financial instruments in active markets, quoted prices for identical or similar financial instruments in inactive markets, interest rates and yield curves, implied volatilities, and credit spreads)

Level 3 – unobservable inputs

Observable inputs are developed using market data, such as publicly available information about actual events or transactions, and reflect the assumptions that market participants would use to price the financial instrument. Unobservable inputs are those for which market data are not available and are developed using the best information available about the assumptions that market participants would use to price the financial instrument. GAAP requires valuation techniques to maximize the use of relevant observable inputs and minimize the use of unobservable inputs. When multiple inputs are used to derive fair value, the financial instrument is assigned to the level within the fair value hierarchy based on the lowest-level input that is significant to the fair value of the financial instrument. Input levels are not necessarily an indication of the risk or liquidity associated with financial instruments at that level but rather the degree of judgment used in determining those values.

Valuation Techniques Debt securities generally are traded in the over-the-counter (OTC) market. Securities with remaining maturities of one year or more at the time of acquisition are valued at prices furnished by dealers who make markets in such securities or by an independent pricing service, which considers the yield or price of bonds of comparable quality, coupon, maturity, and type, as well as prices quoted by dealers who make markets in such securities. Securities with remaining maturities of less than one year at the time of acquisition generally use amortized cost in local currency to approximate fair value. However, if amortized cost is deemed not to reflect fair value or the fund holds a significant amount of such securities with remaining maturities of more than 60 days, the securities are valued at prices furnished by dealers who make markets in such securities or by an independent pricing service. Generally, debt securities are categorized in Level 2 of the fair value hierarchy; however, to the extent the valuations include significant unobservable inputs, the securities would be categorized in Level 3.

Equity securities listed or regularly traded on a securities exchange or in the OTC market are valued at the last quoted sale price or, for certain markets, the official closing price at the time the valuations are made. OTC Bulletin Board securities are valued at the mean of the closing bid and asked prices. A security that is listed or traded on more than one exchange is valued at the quotation on the exchange determined to be the primary market for such security. Listed securities not traded on a particular day are valued at the mean of the closing bid and asked prices. Actively traded equity securities listed on a domestic exchange generally are categorized in Level 1 of the fair value hierarchy. OTC Bulletin Board securities, certain preferred securities, and equity securities

traded in inactive markets generally are categorized in Level 2 of the fair value hierarchy. Assets and liabilities other than financial instruments, including short-term receivables and payables, are carried at cost, or estimated realizable value, if less, which approximates fair value.

Thinly traded financial instruments and those for which the above valuation procedures are inappropriate or are deemed not to reflect fair value are stated at fair value as determined in good faith by the Valuation Committee. The objective of any fair value pricing determination is to arrive at a price that could reasonably be expected from a current sale. Financial instruments fair valued by the Valuation Committee are primarily private placements, restricted securities, warrants, rights, and other securities that are not publicly traded.

Subject to oversight by the Board, the Valuation Committee regularly makes good faith judgments to establish and adjust the fair valuations of certain securities as events occur and circumstances warrant. For instance, in determining the fair value of troubled or thinly traded debt instruments, the Valuation Committee considers a variety of factors, which may include, but are not limited to, the issuer's business prospects, its financial standing and performance, recent investment transactions in the issuer, strategic events affecting the company, market liquidity for the issuer, and general economic conditions and events. In consultation with the investment and pricing teams, the Valuation Committee will determine an appropriate valuation technique based on available information, which may include both observable and unobservable inputs. The Valuation Committee typically will afford greatest weight to actual prices in arm's length transactions, to the extent they represent orderly transactions between market participants, transaction information can be reliably obtained, and prices are deemed representative of fair value. However, the Valuation Committee may also consider other valuation methods such as a discount or premium from market value of a similar, freely traded security of the same issuer; discounted cash flows; yield to maturity; or some combination. Fair value determinations are reviewed on a regular basis and updated as information becomes available, including actual purchase and sale transactions of the issue. Because any fair value determination involves a significant amount of judgment, there is a degree of subjectivity inherent in such pricing decisions, and fair value prices determined by the Valuation Committee could differ from those of other market participants. Depending on the relative significance of unobservable inputs, including the valuation technique(s) used, fair valued securities may be categorized in Level 2 or 3 of the fair value hierarchy.

Valuation Inputs The following table summarizes the fund's financial instruments, based on the inputs used to determine their fair values on February 28, 2017:

(\$000s)	Level 1	Level 2	Level 3	Total Value
	Quoted Prices	Significant Observable Inputs	Significant Unobservable Inputs	
Investments in Securities, except:	\$ -\$	1,174,612	\$ - 9	1,174,612
Common Stocks	 7		_	7
Total	\$ 7\$	1,174,612	\$ -9	1,174,619

There were no material transfers between Levels 1 and 2 during the year ended February 28, 2017.

NOTE 3 - OTHER INVESTMENT TRANSACTIONS

Consistent with its investment objective, the fund engages in the following practices to manage exposure to certain risks and/or to enhance performance. The investment objective, policies, program, and risk factors of the fund are described more fully in the fund's prospectus and Statement of Additional Information

Restricted Securities The fund may invest in securities that are subject to legal or contractual restrictions on resale. Prompt sale of such securities at an acceptable price may be difficult and may involve substantial delays and additional costs.

When-Issued Securities The fund may enter into when-issued purchase or sale commitments, pursuant to which it agrees to purchase or sell, respectively, an authorized but not yet issued security for a fixed unit price, with payment and delivery not due until issuance of the security on a scheduled future date. When-issued securities may be new securities or securities issued through a corporate action, such as a reorganization or restructuring. Until settlement, the fund maintains liquid assets sufficient to settle its commitment to purchase a when-issued security or, in the case of a sale commitment, the fund maintains

an entitlement to the security to be sold. Amounts realized on when-issued transactions are included in realized gain/loss on securities in the accompanying financial statements.

Other Purchases and sales of portfolio securities other than short-term securities aggregated \$225,069,000 and \$135,861,000, respectively, for the year ended February 28, 2017.

NOTE 4 - FEDERAL INCOME TAXES

No provision for federal income taxes is required since the fund intends to continue to qualify as a regulated investment company under Subchapter M of the Internal Revenue Code and distribute to shareholders all of its income and gains. Distributions determined in accordance with federal income tax regulations may differ in amount or character from net investment income and realized gains for financial reporting purposes. Financial reporting records are adjusted for permanent book/tax differences to reflect tax character but are not adjusted for temporary differences.

The fund files U.S. federal, state, and local tax returns as required. The fund's tax returns are subject to examination by the relevant tax authorities until expiration of the applicable statute of limitations, which is generally three years after the filing of the tax return but which can be extended to six years in certain circumstances. Tax returns for open years have incorporated no uncertain tax positions that require a provision for income taxes.

Reclassifications to paid-in capital relate primarily to expiring capital loss carryforwards. Reclassifications between income and gain relate primarily to the character of market discount at time of sale. For the year ended February 28, 2017, the following reclassifications were recorded to reflect tax character (there was no impact on results of operations or net assets):

(\$000s)	
Undistributed net investment income	\$ (247)
Undistributed net realized gain	3,423
Paid-in capital	(3,176)

Distributions during the years ended February 28, 2017 and February 29, 2016, were characterized for tax purposes as follows:

000s)				
	Feb	ruary 28	Feb	ruary 29
		2017		2016
Ordinary income	\$	_	\$	133
ax-exempt income		37,218		34,702
otal distributions	\$	37,218	\$	34,835

At February 28, 2017, the tax-basis cost of investments and components of net assets were as follows:

(\$000s)		
Cost of investments	\$	1,138,389
Unrealized appreciation	\$	46,451
Unrealized depreciation		(10,221)
Net unrealized appreciation (depreciation)		36,230
Undistributed ordinary income		224
Undistributed tax-exempt income		37
Capital loss carryforwards		(5,533)
Paid-in capital	<u></u>	1,147,360
Net assets	\$	1,178,318

The fund intends to retain realized gains to the extent of available capital loss carryforwards. Because the fund is required to use capital loss carryforwards that do not expire before those with expiration dates, all or a portion of its capital loss carryforwards subject to expiration could ultimately go unused. During the year ended February 28, 2017, the fund utilized \$1,344,000 of capital loss carryforwards. The fund's available capital loss carryforwards as of February 28, 2017, expire as follows: \$1,598,000 in fiscal 2018; \$3,935,000 have no expiration.

NOTE 5 - RELATED PARTY TRANSACTIONS

The fund is managed by T. Rowe Price Associates, Inc. (Price Associates), a wholly owned subsidiary of T. Rowe Price Group, Inc. (Price Group). The investment management agreement between the fund and Price Associates provides for an annual investment management fee, which is computed daily and paid monthly. The fee consists of an individual fund fee, equal to 0.10% of the fund's average daily net assets, and a group fee. The group fee rate is calculated based on the combined net assets of certain mutual funds sponsored by Price Associates (the group) applied to a graduated fee schedule, with rates ranging from 0.48% for the first \$1 billion of assets to 0.270% for assets in excess of \$500 billion. The fund's group fee is determined by applying the group fee rate to the fund's average daily net assets. At February 28, 2017, the effective annual group fee rate was 0.29%.

In addition, the fund has entered into service agreements with Price Associates and a wholly owned subsidiary of Price Associates (collectively, Price). Price Associates provides certain accounting and administrative services to the fund. T. Rowe Price Services, Inc., provides shareholder and administrative services in its capacity as the fund's transfer and dividend-disbursing agent. For the year ended February 28, 2017, expenses incurred pursuant to these service agreements were \$74,000 for Price Associates and \$202,000 for T. Rowe Price Services, Inc. The total amount payable at period-end pursuant to these service agreements is reflected as Due to Affiliates in the accompanying financial statements

The fund may participate in securities purchase and sale transactions with other funds or accounts advised by Price Associates (cross trades), in accordance with procedures adopted by the fund's Board and Securities and Exchange Commission rules, which require, among other things, that such purchase and sale cross trades be effected at the independent current market price of the security. Purchases and sales cross trades aggregated \$10,800,000 and \$10,725,000, respectively, with net realized gain of \$0 for the year ended February 28, 2017. Generally, cross trades were executed due to the limited supply of high-quality municipal securities available in the market and the adviser's decision to continue owning certain investments in funds or accounts advised by Price Associates.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Trustees of T. Rowe Price State Tax-Free Income Trust and Shareholders of Virginia Tax-Free Bond Fund

In our opinion, the accompanying statement of assets and liabilities, including the portfolio of investments, and the related statements of operations and of changes in net assets and the financial highlights present fairly, in all material respects, the financial position of the Virginia Tax-Free Bond Fund (one of the portfolios comprising T. Rowe Price State Tax-Free Income Trust, hereafter referred to as the "Fund") at February 28, 2017, the results of its operations for the year then ended, the changes in its net assets for each of the two years in the period then ended and the financial highlights for each of the five years in the period then ended, in conformity with accounting principles generally accepted in the United States of America. These financial statements and financial highlights (hereafter referred to as "financial statements") are the responsibility of the Fund's management. Our responsibility is to express an opinion on these financial statements based on our audits. We conducted our audits of these financial statements in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. We believe that our audits, which included confirmation of securities at February 28, 2017 by correspondence with the custodian and brokers, provide a reasonable basis for our opinion.

PricewaterhouseCoopers LLP Baltimore, Maryland April 19, 2017

Tax Information (Unaudited) for the Tax Year Ended 2/28/17

We are providing this information as required by the Internal Revenue Code. The amounts shown may differ from those elsewhere in this report because of differences between tax and financial reporting requirements.

The fund's distributions to shareholders included \$37,090,000 which qualified as exempt-interest dividends.

For taxable non-corporate shareholders, less than \$1,000 of the fund's income represents qualified dividend income subject to a long-term capital gains tax rate of not greater than 20%.

For corporate shareholders, less than \$1,000 of the fund's income qualifies for the dividends-received deduction.

Information on Proxy Voting Policies, Procedures, and Records

A description of the policies and procedures used by T. Rowe Price funds and portfolios to determine how to vote proxies relating to portfolio securities is available in each fund's Statement of Additional Information. You may request this document by calling 1-800-225-5132 or by accessing the SEC's website, sec.gov.

The description of our proxy voting policies and procedures is also available on our corporate website. To access it, please visit the following Web page:

https://www3.troweprice.com/usis/corporate/en/utility/policies.html

Scroll down to the section near the bottom of the page that says, "Proxy Voting Policies." Click on the Proxy Voting Policies link in the shaded box.

Each fund's most recent annual proxy voting record is available on our website and through the SEC's website. To access it through T. Rowe Price, visit the website location shown above, and scroll down to the section near the bottom of the page that says, "Proxy Voting Records." Click on the Proxy Voting Records link in the shaded box.

How to Obtain Quarterly Portfolio Holdings

The fund files a complete schedule of portfolio holdings with the Securities and Exchange Commission for the first and third quarters of each fiscal year on Form N-Q. The fund's Form N-Q is available electronically on the SEC's website (sec.gov); hard copies may be reviewed and copied at the SEC's Public Reference Room, 100 F St. N.E., Washington, DC 20549. For more information on the Public Reference Room, call 1-800-SFC-0330.

About the Fund's Trustees and Officers

Your fund is overseen by a Board of Trustees (Board) that meets regularly to review a wide variety of matters affecting or potentially affecting the fund, including performance, investment programs, compliance matters, advisory fees and expenses, service providers, and business and regulatory affairs. The Board elects the fund's officers, who are listed in the final table. At least 75% of the Board's members are independent of T. Rowe Price Associates, Inc. (T. Rowe Price), and its affiliates; "inside" or "interested" Trustees are employees or officers of T. Rowe Price. The business address of each director and officer is 100 East Pratt Street, Baltimore, Maryland 21202. The Statement of Additional Information includes additional information about the fund Trustees and is available without charge by calling a T. Rowe Price representative at 1-800-638-5660.
